

Electricity Networks Lead

Senior or Principal Analyst

Based in Edinburgh, Cambridge, London, or Paris

About Delta-EE – Experts in New Energy

Delta-EE is Europe's leading research and consulting company helping organisations develop the right strategies, business models and customer propositions for the energy transition. The depth and breadth of our expertise in the energy transition space makes Delta-EE unique and our mission is to help our clients successfully navigate the change from 'old energy' to 'new energy'. We provide bespoke consultancy and subscription research services which answer critical questions that impact our clients' businesses and allow clients to access in-depth research in a specific knowledge area.

The Opportunity

We are looking for an **Electricity Networks Lead** (Senior or Principal Analyst) who will be responsible for the positioning, delivery, and growth of Delta-EE's consulting and modelling activity with electricity network companies, and for providing thought leadership on the growing interface between electricity networks, customers and their distributed energy resources, wholesale markets and retail.

You will be responsible for supporting the network sector to enable the energy transition to happen as smoothly, quickly, and effectively as possible.

The focus of the role is on our consulting activities, but it will require working closely with our subscription research Product Manager.

This is a great opportunity:

- To become a thought leader in the European networks sector as the energy transition gathers pace
- To build relationships with network and related organisations across the UK, increasingly across Europe, and beyond
- To grow Delta-EE's support for the electricity network sector and to lead our modelling capability.

Key elements of the role:

- Co-ordination and driving our position for how we make a difference for network companies
- Being a thought leader for electricity distribution networks and their interface with distributed energy resources and the whole system
- Oversight and co-ordination of our electricity network related consultancy projects, including managing and directing projects
- Leadership of our modelling activities for electricity networks – both delivering models and supporting others
- Input into our subscription research, supporting the shaping of the deliverables and subscriber interaction

You will be responsible for:

- **Strategic leadership** of our work with electricity networks companies
- **Thought leadership and expertise**
 - Being immersed in the market
 - Developing opinions and views
 - Engaging with clients and prospects
- **Delivering consultancy projects**, managing and delivering research and modelling (typically in excel, potentially using tools such as PLEXOS).
- **Business development:** Co-ordinating and driving our discussions and relationships with electricity network companies.

Requirements, Skills and Qualifications

If you have the right skills for the job, we want to hear from you. We encourage applications from the right candidates regardless of age, disability, gender identity, sexual orientation, religion, belief, or race.

- You will be curious, thoughtful, and highly motivated to play a role in the energy transition.
- You will enjoy building relationships with people, developing models and carrying out analysis, and being at the forefront of how the networks sector is evolving across Europe and beyond.
- You will display high levels of technical, functional, and professional knowledge, being able to be immersed in the technical, regulatory and commercial opportunities and challenges facing network companies.

For this position, you will be able to demonstrate:

- ~5+ years' experience of working in the (electricity distribution) networks sector
 - This will be with a consultancy, a networks company, or an organisation working very closely with networks companies.
- A rounded understanding of electricity distribution business – technical, commercial, and regulatory.
- A strong understanding of the whole electricity value chain, including energy markets and system operation.
- An excellent understanding of the key issues faced by the network sector – from both a company and sector perspective.
- First-hand experience of working in detail on some of these issues – for example in an innovation role of a networks company.
- Modelling capability – strong excel skills, potentially with experience of models such as PLEXOS, to understand the impact of distributed energy resources on electricity networks. Note that we are *not* looking for detailed power system modelling capability as we are not a power systems or engineering consultancy.
- Experience in communicating with impact – internally and externally, in writing and in face to face.
- A strong network of relevant contacts, both inside of and outside of your organisation.
- Alignment with our company values
- Excellent communication and interpersonal skills

DELTA-EE

- Thought leadership and strong analytical skills – an ability to simplify complexity
- Team player – collaborative, setting standards, building relationships, providing feedback
- Persistence and resilience

Salary and Benefits – what do we offer?

- Flexible and family friendly working arrangements
- Rewarding salary based on experience and qualifications
- Profit-related bonus scheme
- Opportunity to benefit in time from the company's employee share scheme
- A focus on learning & development
- Employee Assistance Programme
- Team social events
- Specific additional benefits to UK or France

Our team

As a team, we always work in line with our company values. We are a *Happy and Motivated Team*, who focus on *Doing the right thing* and *Fulfilling our potential*. Creating a great company culture and being a place that people love to work is very important to us; we are a collaborative, inclusive and friendly team.
